Curriculum Vitae

James F. Bowring

15 September 2013

General Information

College of Charleston, Charleston, SC
Department of Computer Science
66 George Street, Charleston, SC 29424
Phone: (843) 953-0805
Mobile: (843) 608-1399
Fax: (843) 593 -8154
Email: bowringj@cofc.edu
Web: www.cs.cofc.edu/~bowring
Lab: www.CIRDLES.org

Research Interests

My research interests include software architecture, software engineering, software testing, and statistical behavioral analysis of software systems. The theme of my current research is the scientific exploration of software development processes within the constraints of a specific science domain with the twin goals of improving how we model problems and of improving how we design and implement computer-based solutions.

My current research focuses on the collaborative development of cyber infrastructure to encode and support the data processing and associated workflows employed in the earth sciences. This work is supported by grants from the National Science Foundation and private sources.

Education

Ph.D. Computer Science, September 2001 – December 2006
Georgia Institute of Technology, Atlanta, Georgia
Dissertation: "Modeling and Predicting Software Behaviors"
Advisors: Mary Jean Harrold and James M. Rehg

BS Summa cum Laude in Computer Science Information Systems, May 2000
College of Charleston, Charleston, South Carolina

BA Summa cum Laude in Historic Preservation & Community Planning, May 2000
College of Charleston, Charleston, South Carolina

Professional Experience - Computing

Assistant Professor, Department of Computer Science, College of Charleston,
August 2011-present.
Visiting Assistant Professor, Department of Computer Science, College of Charleston,
August 2006 – May 2011.
MedicAllInOne, LLC, Mount Pleasant, South Carolina, Owner, 2000 – present,
Software architect, engineer
Sunchex Systems, LLC, Mount Pleasant, SC, Owner, 1980 – present,
Software architect, engineer
CAMmatic, Inc., Mount Pleasant, South Carolina, 1999 - 2007
Consultant Software Engineer for *RPWorks* - Rapid Prototyping solutions
Charleston Air Force Base, Phoenix Star Quality Management, 1998 – 2000,
Software architect, engineer
Compusult, Inc., Charleston, South Carolina, 1995 – 2002,
Software architect, engineer
Bolt, Beranek, and Newman, Cambridge, Massachusetts, 1969 – 1970
Lisp Programmer in Artificial Intelligence lab, directed by Dr. Daniel Bobrow
Project MAC, Massachusetts Institute of Technology, Cambridge, Mass., 1967
Lisp Programmer in Artificial Intelligence lab, directed by Dr. Seymour Papert
Entelek, Inc., Gloucester, Massachusetts, 1966 – 1968
Student Software Consultant for Educational Products Division
Berkeley Enterprises, Inc., Publisher of "Computers and Automation," Newton, Mass.,
1966 – 1968, Student Consultant to owner Edmund C. Berkeley

Teaching Experience

College of Charleston, Department of Computer Science
Assistant Professor, 2013(fall)
CSCI-362 Software Engineering (2 instances)
Assistant Professor, 2011(fall) – 2013 (spring)
CSCI-230 Data Structures and Algorithms
CSCI-325 Functional and Logic Programming
CSCI-362 Software Engineering (2 instances)
CSCI-462 Software Engineering Practicum (2 instances)
CSIS-633 Semantic Web Principles and Practice (graduate level)
CSIC-658 Software Testing and Maintenance (graduate level)
Visiting Assistant Professor, 2009 (fall) – 2011 (spring)
FYSM-117 Designing Responses to Large-Scale Natural Disasters
CSCI-360 Software Architecture and Design (2 instances)
CSCI-392 Seminar for Seniors
CSIS-602 Foundations of Software Engineering (graduate level)
Visiting Assistant Professor, 2006 (fall) – 2009 (spring)
CSCI-110 Computer Fluency (5 instances)

Teaching Experience (cont.)

CSCI-199 Visual and Computational Thinking (Learning Community)
CSCI-230 Data Structures and Algorithms (directed study for 1 student)
CSCI-332 Database Concepts
CSCI-360 Software Architecture and Design (3 instances)
CSCI-362 Software Engineering (3 instances)
CSCI-392 Seminar for Seniors
CSCI-462 Software Engineering Practicum
CSIS-601 Data Modeling (graduate level)
CSIS-602 Foundations of Software Engineering (graduate level)
CSIS-603 Object-Oriented Design Patterns (graduate level)
CSIS-658 Software Testing and Maintenance (graduate level)
CSIS-690 (633) Semantic Web Principles and Practice (graduate level)

Curriculum Development

2012: *CSCI-230 Data Structures and Algorithms:* I updated this course by introducing the practice of having students present their programming assignments for review by their classmates in the manner of studio art classes. The learning objective was to give confidence and knowledge about the wide range of possible solutions to a given problem. Syllabus at:
http://www.cs.cofc.edu/~bowring/classes/csci%20230/fall%202012/CSCI-230-001-2012.pdf

2011: *CSCI-462 Software Engineering Practicum:* I updated this course so that the students would be required to form teams and to select, join, and contribute to an active open source development community. This provides real-world practical experience with industrial-scale software systems similar to those the students will encounter in their careers. Also, I introduced the requirement that each student contribute 1000 words or more per week to a public, professional blog recounting their assignments and progress.
Syllabus at:
http://www.cs.cofc.edu/~bowring/classes/csci%20462/2013%20Spring/CSCI-462-001-2013-1.pdf

2011: *CSCI-362 Software Engineering:* I updated this course so that the students are required to form into teams tasked with developing a prototype testing environment for an open source software product. The project is designed to have the students experience on a small scale a realistic team-based software development effort informed by their readings. Syllabus at:
http://www.cs.cofc.edu/~bowring/classes/csci%20362/fall%202012/CSCI-362-001-2012.pdf

Teaching Experience (cont.)

Curriculum Development (cont.)

2009 (fall): *FYSM-117 Designing Responses to Large-Scale Natural Disasters*: I successfully proposed a first year seminar in which students gain first-hand experience working in teams to propose solutions to the complex, interdisciplinary problem of creating national response strategies for natural disasters. My approach emphasizes computational thinking and problem solving. Students receive training in skills such as library research, electronic communications, and web design. For 2009, the theme is the H1N1 Pandemic. Syllabus at:
www.cs.cofc.edu/~bowring/classes/csis_117/fall_2009/FSYM-117-001-2009-1.pdf

2009: *CSIS-690 (633) Semantic Web Principles and Practice*: I developed the curriculum and course materials for a new graduate course in semantic web technologies. Syllabus at:
www.cs.cofc.edu/~bowring/classes/csis 633/2009 may_evening/CSIS_633_SemanticWebPrinciplesAndPracticeSyllabus.2.pdf

2007: *CSCI-199 Visual and Computational Thinking*: I collaborated with Dr. Marian Mazzone, Chair of the Art History Department at the College of Charleston, to create a six credit-hour learning-community course entitled "Visual and Computational Thinking." The course guides students to analyze and present information visually, emphasizing imagination, creativity, and problem solving. Syllabus at:
www.cs.cofc.edu/~bowring/classes/csci 199/CSCI-199-002-2007-7.c.pdf

Georgia Institute of Technology, College of Computing

2005-2006: *Research Coordinator:* I supervised two undergraduates as research assistants for three semesters. I also worked with a Master of Science student to extend my research work in modeling software behaviors to the testing legacy systems.

2005: *Student Teacher*: I assisted my advisor in teaching CS4001: Computing and Society, fall 2005.

Mentoring Experience

College of Charleston, Department of Computer Science

2012-2013: I train with the College's Mentoring Matters, and mentor a student.

2010-2011: I mentor a student in the McNair Scholars Program to a successful admission to the Ph.D. program in Computer Science at North Carolina State.

2009-2013: I mentor each year a student participating in the South Carolina Alliance for Minority Participation (SCAMP) who works with me in CIRDLES.

2008-2013: I direct and mentor two to four undergraduate student researchers each semester and summer as part of my research efforts at CIRDLES.

2008-2012: I mentored each year for 12 weeks a Computer Science department internship student from the University of La Rochelle, France as a CIRDLES student researcher.

2009-2010: I mentored an 8th grade student from Buist Academy by providing a shadowing experience coordinated by the Charleston County School District.

Research Experience

College of Charleston, Department of Computer Science

2009 – 2013: *Cyber Infrastructure Research and Development Lab for the Earth Sciences*: In 2010 I was awarded as Principal Investigator the first year of a three-year multi-institution NSF grant entitled "Collaborative Research: Analytical Techniques and Software: Development of Cyber Infrastructure to Support Laser-Ablation ICP Mass Spectrometry." The second and third years of the award were funded for 2011-2012 and 2012-2013. CIRDLES' ongoing open source software development projects are producing an exemplar end-to-end data processing system for uranium-lead geochronological data that links data production to data archiving. We intend this system to be the template for subsequent efforts to manage all geochronological data processing. The website https://CIRDLES.org serves as an international community resource for geochronologists dedicated to advancing their data-processing software. CIRDLES also provides research jobs and internships for undergraduates and foreign exchange students. During the term of this NSF grant, Exxon Mobil Upstream Research Corp. provided additional complementary funding for each year.

Research Experience (cont.)

2008 – 2009: *Cyber Infrastructure Research and Development Lab for the Earth Sciences*: I founded and direct CIRDLES, funded through 2009 as a sub-award to an NSF-funded project directed by J. Douglas Walker of the University of Kansas, entitled "Collaborative Project: Facility Support: EarthChem – Advancing Data Management in Solid Earth Geochemistry."

2007: *Automated Debugging:* I collaborated with James Jones and Mary Jean Harrold of Georgia Tech to develop machine-learning techniques to assist the automated debugging of programs. This work combines my behavior classification work with Jones' fault-localization work. This work was published in the proceedings of ISSTA 2007 (see publications).

Georgia Institute of Technology, College of Computing, Ph.D. student 2001-2006

Dissertation Summary:

Software systems will eventually contribute to their own maintenance using implementations of self-awareness. Understanding how to specify, model, and implement software with a sense of self is a daunting problem. This research draws inspiration from the automatic functioning of a gimbal - a self-righting mechanical device that supports an object and maintains the orientation of this object with respect to gravity independently of its immediate operating environment. A software gimbal exhibits a self-righting feature that provisions software with two auxiliary mechanisms: a historical mechanism and a reflective mechanism. The historical mechanism consists of behavior classifiers trained on statistical models of data that are collected from executions of the program that exhibit known behaviors of the program. The reflective mechanism uses the historical mechanism to assess an ongoing or selected execution. This dissertation presents techniques for the identification and modeling of program execution features as statistical models. It further demonstrates how statistical machine-learning techniques can be used to manipulate these models and to construct behavior classifiers that can automatically detect and label known program behaviors and detect new unknown behaviors. The thesis is that statistical summaries of data collected from a software program's executions can model and predict external behaviors of the program. This dissertation presents three control-flow features and one value-flow feature of program executions that can be modeled as stochastic processes exhibiting the Markov property. A technique for building automated behavior classifiers from these models is detailed. Empirical studies demonstrating the efficacy of this approach are presented. The use of these techniques in example software engineering applications in the categories of software testing and failure detection are described.

Research Experience (cont.)

Aristotle Research Group Projects:

Software Tomography: I initiated and performed novel research to develop techniques to dynamically partition testing tasks across a large number of deployed copies of a program. I developed the software that demonstrated empirically the efficacy of the technique for the branch-coverage testing criterion. Software Tomography is now part of the GAMMA project at Georgia Tech.

Argo: I initiated and developed novel inter-disciplinary research between software engineering and machine learning that showed that certain event sequences in the execution of a program were stochastic processes that exhibit the Markov property. I developed the Argo system as a discovery tool and for performing empirical studies.

Tripoli, U-Pb_Redux, Dzdatabase, and EarthChem: components of an integrated system for archiving, analyzing, and portraying U-Th-Pb geochronologic data. Gehrels, G., Walker, J. D., Bowring, J. F., Bowring, S. A., May, S. Proceedings of 5th Biennial Geochemical SIMS Workshop (BGSW5). P-08. Madison: University of Wisconsin, Madison. 2008.

Published Open-Source Software (perpetual development and release)

Tripoli (open source, WinOS, 2002 – present): *Tripoli* is a key component of the cyber infrastructure developed for CIRDLES. *Tripoli* imports raw mass spectrometer data files and supports interactive visualization of temporal trends, rigorous statistical filtering, and the calculation of statistical parameters. The program exports results in XML, validated by schema, to U-Pb_Redux. Publish site: http://eaps.mit.edu/research/group/IGLab/tripoli/ or https://CIRDLES.org .

U-Pb_Redux (open source, platform independent, 2006 – present: *U-Pb_Redux* is the second key component for CIRDLES, with full U-Pb data reduction and uncertainty propagation. The program provides sophisticated graphical and statistical tools for data analysis and compilation. These include interactive data tables and concordia and weighted mean plots, dynamic decomposition of uncertainties into contributions from individual sources, and algorithms for propagation of systematic uncertainties. *U-Pb_Redux* also generates these outputs as publication-ready vector graphics files. It publishes and retrieves entries via the NSF-sponsored community Geochron archival database. Publish site: https://CIRDLES.org .

Conferences Organized

In 2007, I collaborated with Dr. Marian Mazzone, Chair of the Art History Department to create and host a conference in conjunction with the course we were teaching (see CSCI-199 above.) The conference was called: Visual and Computational Teaching and Learning: a conference for college educators and was held November 16-17, 2007. Our motivation was that the liberal arts and sciences are embracing the computer revolution on a worldwide basis as educators create new courses to explore the interplay of computing and other disciplines. There is a common theme of visual and computational creativity at the core of these efforts. For both teachers and students the computer as a medium increasingly shapes how we think, work, and create. Digitized visual representations of information are becoming ubiquitous in our computerized culture, thus in the 21st century, students need to know how to analyze and manipulate representations of information on the computer effectively.
