Book Report Guidelines

Select a book (physical or electronic) that interests you and that is related to the course material.

Read the book critically.

Your report should summarize the general thesis of the book and evaluate how the author succeeds in defending the thesis. In addition, select a specific issue within the book, say a chapter's contents, and critique the author's approach: do you agree or disagree and why? Prepare to present this specific issue and your evaluation to the class.
